

**ABSTRACT**

A system for case based, dynamic document layout in accordance with embodiments of the present invention includes a comparison system, a determination system, and a mutation system. The comparison system that  
5 compares one or more elements of at least a portion of an original document against the same elements in at least a portion each of a plurality of stored documents. The determination system identifies the stored document with the portion which is closest to the portion of the original document based on the comparing. The mutation system applies one or mutators to the portion of the  
10 original document which were used in the portion of the identified stored document.
